PROFESSIONAL SUMMARY

Computer Science graduate from FAST University with 3+ years of software development experience specializing in full-stack web development, REST API integration, and AI/ML applications. Proven track record building scalable applications using React.js, Node.js, and Python with strong database management skills. Experienced in agile development, Git workflows, and collaborating with cross-functional teams. Passionate about AI technologies and eager to contribute to innovative supply chain solutions.

CORE SKILLS

Programming: JavaScript, Python, Java, Kotlin, C++, GoLang

Frontend Development: React.js, Angular, HTML5, CSS3, UI/UX Design

Backend Development: Node.js, Express.js, REST APIs, Flask

Databases: MongoDB, Firebase, PostgreSQL, SQL

AI/ML Technologies: TensorFlow, OpenCV, Mediapipe, Computer Vision

DevOps & Tools: Git, GitHub, AWS CI/CD, Docker, JIRA, Postman

Automation & Low-Code: n8n, Make (Integromat), WeWeb, Bubble.io

CRM & Marketing Platforms: GoHighLevel (GHL) – Funnels, Automations, CRM, Pipelines, Sub-accounts

PROFESSIONAL EXPERIENCE

Software Engineer | Social Tongue

Nov 2025 – Jan 2026

- Developed and customized web applications using low-code platform WeWeb, enabling rapid delivery of client-facing solutions
- Built and managed complex automation workflows using n8n and Make (Integromat) to streamline business processes and reduce manual effort
- Integrated third-party APIs and services through automated pipelines, improving operational efficiency across multiple workflows
- Collaborated with cross-functional teams to gather requirements and translate them into scalable low-code and automation solutions
- Maintained and optimized existing automation flows, ensuring reliability and performance across integrated systems

Software Engineer | Quixas Technology Ltd.

Aug 2024 – Oct 2025

- Develop scalable web and mobile applications using modern frameworks and low-code platforms
- Built and integrated REST APIs for seamless application functionality and performance optimization
- Collaborate with cross-functional teams in agile sprints to design and implement scalable solutions
- Enhance user experience through custom workflows, UI components, and automation
- Conduct comprehensive debugging, troubleshooting, and QA testing to ensure high-quality software delivery

Android Developer | Terafort Ltd.

Dec 2023 – Jun 2024

- Developed and maintained Android applications using modern development practices

- Implemented RESTful API connections to backend services for data management
- Applied MVVM architecture patterns and utilized advanced Android SDK features
- Worked with database integration using Firebase and local storage solutions

Web Application Developer Intern | Chakor Software

Jul 2023 – Oct 2023

- Developed low-code & AI-assisted full-stack solutions using Bubble.io, WeWeb, and custom JavaScript
- Led capstone project with live chatbot integrated into company product dashboard
- Practiced QA testing, version control, and agile development methodologies

EDUCATION

Bachelor of Computer Science | FAST – NUCES

2019 – 2023

CERTIFICATIONS

- AWS Fundamentals for Istio by Solo.io | Solo.io – 2023
- Web Development and Designing | The Sparks Foundation – 2023

KEY PROJECTS

AI LinkedIn Post Generation Agent

Technologies: *n8n, NVIDIA LLM API, Google Sheets API, Gmail API, LinkedIn API*

- Built an automated content pipeline that generates, refines, and publishes LinkedIn posts from a single topic input, using two sequential LLM passes for drafting and tone refinement
- Implemented a human-in-the-loop approval system via Gmail with a revision feedback loop, ensuring quality control before publishing
- Integrated Google Sheets, Gmail, and LinkedIn APIs via OAuth2 to fully automate content generation through publication

PDF Chat Agent (RAG-Based Document Q&A)

Technologies: *n8n, RAG, Vector Databases (Pinecone), Embeddings, LLM APIs*

- Built an AI agent in n8n that lets users upload any PDF and ask natural-language questions, returning instant, context-grounded answers from the document.
- Designed a RAG pipeline that chunks document text, generates embeddings, and stores them in a Pinecone vector database, retrieving the most relevant passages at query time to ground LLM responses and minimize hallucination.
- Orchestrated the full pipeline upload, chunking, embedding, retrieval, and generation as an automated n8n workflow triggered via webhook.

Personal Assistant Agent

Technologies: n8n, Tool Calling, APIs, Automation

- Developed an autonomous AI assistant in n8n that manages tasks, reminders, emails, and scheduling on the user's behalf, functioning as a hands-off AI secretary.
- Connected the agent to Gmail and Google Calendar via API, using LLM tool/function calling so it interprets a request and automatically triggers the right action — drafting an email, creating a reminder, or booking an event.
- Built conditional routing logic so incoming requests are directed to the correct downstream automation without manual oversight

GoHighLevel CRM & Automation Platform | *Client Onboarding & Marketing System*

Technologies: GoHighLevel (GHL), REST APIs, Webhooks, Zapier, SMS/Email Automation

- Designed and deployed a multi-client GoHighLevel sub-account structure to manage CRM pipelines, leads, and customer communication for a digital marketing agency
- Built automated onboarding workflows using GHL's automation builder — triggering SMS/email sequences, task assignments, and pipeline stage updates based on client actions
- Integrated GoHighLevel with third-party tools via webhooks and REST APIs, enabling real-time data sync between GHL and external platforms
- Created high-converting sales funnels and landing pages within GHL, reducing lead acquisition cost by streamlining the end-to-end client journey
- Configured and managed GHL calendar, appointment booking, and follow-up reminders, improving client retention and reducing no-show rates

Jannat Noor Pharmacy System | *Desktop Application with AI Analytics*

Technologies: Python, PostgreSQL, Tkinter

- Custom-built inventory and sales management system with barcode scanning functionality
- Implemented light theme UI and comprehensive report generation features
- Designed with AI analytics plans for future data insights and optimization

Idra'ak (Final Year Project) | *AI/ML Sign Language Translator*

Technologies: Python, TensorFlow, OpenCV, Mediapipe, Android Studio

- Built AI-powered Android application that translates Urdu Sign Language to text and audio
- Integrated TensorFlow models with Flask backend for real-time video processing
- Utilized Computer Vision and Machine Learning APIs for accurate translation

Live Chatbot for Chakor Software | *Capstone Project*

Technologies: Bubble.io, Custom JavaScript

- Developed and deployed chatbot for internal product using low-code platform
- Integrated with company dashboard for real-time communication and user support
- Successfully delivered as capstone project during internship

Under3 Mobile App | *Early Childhood Care Platform*

Technologies: Firebase, Kotlin, Machine Learning APIs, WeWeb

- Developed trauma-informed mobile application with ML screening features
- Implemented secure data management for supporting parents with children under 3

VeteranMeet Social Platform | *Full-Stack Web Application*

Technologies: React.js, Node.js, Express, MongoDB

- Developed dynamic social platform with user authentication and real-time features
- Implemented comprehensive database management and REST API integration

Flash Alert on Call | *Accessibility Android App*

Technologies: Kotlin, Android Studio, Notification APIs

- Created Android app for flashlight notification system for incoming calls/SMS
- Designed for hearing-impaired users with customizable flash patterns

ADDITIONAL QUALIFICATIONS

AI/ML Experience: Hands-on experience with TensorFlow, AI API integration, and machine learning workflows

Agile Development: Proven experience working in sprint-based development cycles

Remote Collaboration: Successfully worked with distributed teams and maintained productivity in remote environments

Problem-Solving: Strong analytical skills with experience in debugging complex technical issues

Learning Agility: Quick to adapt to new technologies and frameworks, as demonstrated by rapid adoption of low-code platforms

INTERESTS

Programming • Web Development • AI/ML Technologies • Content Writing • Graphic Design • Movies
